

# Insulating Glass Units - System Description

The components and manufacturing process described in the following sections provide a detailed reference of the base insulating glass unit tested to Part 2 of EN 1279.

|   |                        |
|---|------------------------|
| Unique Product Reference Number  | Clayton glass Number 6 |
|---|------------------------|

## Inner sealant (if used)

| Manufacturer   | Material Type | Type Reference  | Updated  |
|---|---------------|--|----------|
| Kommerling Naftotherm   | Butyl         | BU-S   | 06.05.11 |
| Bostik  | Butyl         | 2000   | 06.05.11 |
| Fenzi   | Butyl         | Butylver   | 06.05.11 |
| Equipment used for application: Butyl Extruder<br>Allowable defects:  Absolute Limit(s):- 1.2 to 2.8gms per metre per side with minimal breaks in the seal dependant on outer seal.<br><br>Action Limit(s):- 1.2 to 2.8gms per metre per side with minimal breaks in the seal dependant on outer seal. |               |  |          |

## Outer sealant

| Manufacturer    | Material Type               | Type Reference  | Updated  |
|--|-----------------------------|--|----------|
| LJF  | 2 part polyurethane Sealant | 3189/2   | 06.05.11 |
| Fenzi  | 2 part Polysulphide         | Thiover  | 06.05.11 |
| Tremco   | 2 part Polyurethane         | JS442  | 06.05.11 |
| Fenzi  | Hotmelt                     | Hotver 2000  | 06.05.11 |
| European chemical Industries   | 2 part polyurethane Sealant | Emcepren 200   | 06.05.11 |
| Bostik   | Hotmelt                     | 5000   | 06.05.11 |
| Bostik   | Hotmelt                     | P5125  | 06.05.11 |
| Den Braven   | Hotmelt                     | Hottix   | 06.05.11 |
| Dow Corning  | IG silicone Sealant         | 3540   | 06.05.11 |
| Seal properties report reference and date: - refer to sealant manufacturers specifications.<br>Equipment used for application: - Robot guns and hand held guns.<br>Allowable defects:  Absolute Limit(s):- 3 gaps in sealant of 3mm in diameter / per metre of unit.<br><br>Action Limit(s):- 3 gaps in sealant of 3mm in diameter / per metre of unit. |                             |  |          |

**Desiccant**

| Manufacturer  | Material Type | Type Reference  | Moisture absorption capacity  | No. of sides used | Updated  |
|--|---------------|--|---|-------------------|----------|
| Grace  | Phonosorb     | 551 – 3A   | 16.5%   | 2 or 4 sides      | 06.05.11 |
| Grace  | Phonosorb     | 551F – 3A  | 20%   | 2 or 4 sides      | 06.05.11 |
| UOP  | DS2000        | 3A/13X   | 21%   | 2 or 4 sides      | 06.05.11 |
| Galaxy   | Glasmol       | 3A   | 20%   | 2 or 4 sides      | 06.05.11 |
| Zeochem  | Isomol        | 3A   | 20%   | 2 or 4 sides      | 06.05.11 |
| Eurosive   | Ex-mini       | 3A   | 19%   | 2 or 4 sides      | 06.05.11 |
| Nedex  | Zoelan        | 3A   | 20%   | 2 or 4 sides      | 06.05.11 |

**Edge tape (if used)**

| Manufacturer  | Material Type | Type Reference  | Updated |
|--|---------------|--|---------|
|  |               |  |         |
|  |               |  |         |
|  |               |  |         |
|  |               |  |         |
|  |               |  |         |

**Spacer**

| Manufacturer   | Material Type                           | Type Reference  | Updated  |
|---|---|--|----------|
| Profilglass   | Aluminium                               | Bendable   | 06.05.11 |
| Alu-pro   | Aluminium                               | Bendable   | 06.05.11 |
| Swiss   | Plastic                                 | Warm Edge / Gas Fill   | 06.05.11 |
| Thermobar   | Plastic                                 | Warm Edge / Gas Fill   | 06.05.11 |
| Edgetech  | Super Spacer                            | Warm Edge  | 06.05.11 |
| TGI   | Stainless steel / Plastic polypropylene | Bendable / Warm Edge   | 06.05.11 |
| EWS   | Steel                                   | Cut Spacer Bar   | 06.05.11 |
| Thermix   | Stainless Steel / Plastic TX            | Bendable / Warm Edge   | 06.05.11 |
| Allowable defects:  Absolute Limit(s):- +1mm / -0.5mm<br>Action Limit(s):- +1mm / -0.5mm |   |  |          |

|  |
|--|
|  |
|--|

**Corner pieces and connectors (if used)**

| Manufacturer  | Material Type | Type Reference  | Updated  |
|--|---------------|--|----------|
| Profilglass  | Polypropylene | Corner Keys  | 06.05.11 |
| Kronenberg   | Steel         | Connectors   | 06.05.11 |
| Cera   | Plastic       | Connectors   | 06.05.11 |
| Profilglass  | Steel         | Corner Keys  | 06.05.11 |

**Lead tape**

| Manufacturer  | Material Type | Type Reference  | Updated  |
|--|---------------|--|----------|
| Rega   | Adhesive lead | Various thickness and Specification  | 06.05.11 |
| Decra  | Adhesive lead | Various Thickness and Specification  | 06.05.11 |

**Georgian bars**

| Manufacturer  | Material Type | Type Reference  | Updated  |
|--|---------------|--|----------|
| Profilglass  | Aluminium bar | Various Sizes  | 06.05.11 |
| Alu-pro  | Aluminium bar | Various Sizes  | 06.05.11 |
| Ashton   | Classic       | Various sizes  | 06.05.11 |

**Coloured film**

| Manufacturer  | Material Type               | Type Reference  | Updated  |
|--|-----------------------------|--|----------|
| Rega   | Adhesive backed colour film | Various Specifications   | 06.05.11 |
| Decra  | Adhesive backed Colour film | Various Specification  | 06.05.11 |

### Gas filling

|  |                                    |                                    |                          |      |             |
|--|------------------------------------|------------------------------------|--------------------------|------|-------------|
| Gas type   | 1) Argon                           | 2) Krypton                         | 3)                       |      |             |
| Normal filling concentration                       | 1) 88% -5% / +10%                  | 2) 88% -5% / +10%                  | 3)                       |      |             |
| Position and dimensions of filling holes           | Lisec gas press                    |                                    |                          |      |             |
| Position and dimensions of filling holes           | Corner key method<br>6.5mm / 5.0mm | Corner key method<br>6.5mm / 5.0mm |                          |      |             |

## Notes

**General** – The purpose of the System Description is to fully define the base product covered by the test report. It must be detailed in every aspect such that there is no doubt about the products and components used in its manufacturer.

**Unique product reference No** – This is a unique reference number associated with this product description document. It is used as the defining reference for the product and will be quoted in test reports and certificates where applicable.

**Manufacturer** – This is the name of the company that manufactured the product not the supplier that you purchased the product from.

**Type reference** – This is the name and product identifier given by the manufacturer.

**Allowable defects** – These are separated into two limits:

**Absolute limit** – This is the limit at which you reject units. All units outside this limit must be disposed of. For example the seal depth may be described as 5mm minimum however you may wish to allow a seal depth of between 5mm and 4mm for a maximum of 25mm per metre of unit perimeter. Any unit where there is more than 25mm of seal depth between 4 and 5 mm must be rejected. You may also wish to allow 3 air cavities up to 3 mm in diameter per metre of unit perimeter. Likewise, if 4 air cavities are present or the diameter of any air cavity id greater than 3 mm then the unit is rejected.

**Action limit** – This is the limit at which you take action to improve the relevant parameter. For example you may wish to set an action limit of 10 mm for the length of seal with a depth below 5 mm. If, during inspection, this limit is observed then you will need to take action to reduce or eliminate the undersized seal depth.
