

Toughened Pilkington **Flemish™**

Pilkington **Flemish™** is a Privacy Level 1 product in our Replacement Texture Glass Range. The deep nature of the pattern can sometimes make it more susceptible to quality faults when the glass is toughened. If this is a concern, then you may wish to consider choosing another pattern within the Pilkington Texture Glass Range.

The process of toughening oscillates glass within the furnace at variable speeds. Since the Pilkington **Flemish™** pattern is deep and inherently asymmetric relative to other designs in the texture glass range, only a small surface area is in contact with the ceramic rollers in a furnace. Slipping of the glass may occur during the toughening process, and at the points at which the glass is in contact with the ceramic rollers small scratches may be formed.

If you have any questions on this matter please don't hesitate to contact your Pilkington Representative.

Yours sincerely

Leo Pyrah
