MORE.

MORE PANE SAME BEAD

**Triple-glazed performance in
a 28mm double-glazed profile.**

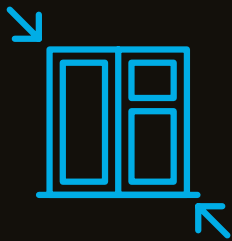

The brittle, hard-to-fit, wafer-thin triple glazing beads are no more with Triple28™. The Monolithic Glass Core means you use the standard double glazing bead system.

MORE PANE LESS WEIGHT

**Only 15% heavier than a
traditional double-glazed unit.**

Traditional triple glazing is heavy. Really heavy. The clever suspended Monolithic Glass Core is only 1.1mm thick which means the weight difference is barely noticeable.

MORE PANE MORE RETRO

**Upgrade existing customers
from double to triple.**

Triple28™ fits straight into the same bead and gasket system as standard 28mm double glazing, creating a simple upgrade opportunity, making it ideal for revisiting past customers.

MORE PANE EVERYWHERE

**94% coverage within
2 hours of a Clayton site.**

Manufactured in the UK and backed by a nationwide delivery network, Triple28™ arrives where and when you need it – helping you keep schedules tight and customers happy.

UPGRADE TO **Triple28™**

Triple28™ is the triple-glazed unit that
changes everything — and nothing.
Three panes of advanced glass in a 28mm
profile that fits straight into existing
frames. More thermal performance.
More acoustic comfort. More UV protection.
Less weight, less hassle, less compromise.
It's triple glazing, finally made simple.

TRIPLE GLAZING MINUS THE DRAMA
