

SmartGlass™

The intelligent choice for conservatory glazing

Smart
Glass™

ClaytonGlass 

The name says it all – SmartGlass™ really is the smartest option for your conservatory.

Ideal not only for your conservatory roof but also for the side frame windows and doors, SmartGlass™ glazing offers a unique, stylish and innovative blend of soundproofing, temperature regulation, natural light and anti-glare technology.

And if you already know and trust our outstanding Celsius Glass™ range of glazing, don't worry. We've now brought Celsius Glass™ and SmartGlass™ together into this exceptional single product range.

Specifically designed for conservatories, atriums, garden rooms, orangeries and lantern roofs, SmartGlass™ is available in five colour tints – Aqua, Blue, Neutral, Bronze and Superview. Each tint delivers temperature-controlled glazing to ensure the ultimate in comfort through the summer and winter. Nearly three times more effective than standard double glazing at retaining warmth, SmartGlass™ still allows plenty of natural light to enter.

We've also cut maintenance to a minimum. SmartGlass™ is genuinely self-cleaning, with a coating that automatically breaks down organic dirt to be washed away by rainfall.

Whether building a new unit or replacing your existing conservatory, you can't choose smarter than SmartGlass™. Call our expert team today – we can't wait to help you.
